Data Protection Measures

BlueMap Marine Weather API

Provider	BlueMap Co., Ltd., 2F, 26 Eungubinam-ro 7beon-gil, Yuseong-gu, Daejeon, Republic of Korea
Service	BlueMap Marine Weather API (https://weather-api.bmap.kr)
Version / Effective	v1.0 / 22 October 2026
Declared regime	GDPR (Regulation (EU) 2016/679) - Gaia-X criterion DS1.4.1
Provider's local law	Personal Information Protection Act (PIPA), Republic of Korea

1. Purpose and scope

This document describes the technical and organisational measures that BlueMap Co., Ltd. ("Provider") applies to protect personal data processed in connection with BlueMap Marine Weather API ("Service"), including access brokered through the Provider's data-space connector (Blue-X). It complements the Service Offering Terms and Conditions and the Usage Terms and Conditions.

The data delivered by the Service (marine weather, ocean and bathymetry data) do not contain personal data. Personal data are processed only as operational metadata of requests and accounts, as listed below.

2. Personal data processed

- **Request logs (Weather API):** timestamp, HTTP method, path, a whitelist of non-personal query parameters, response status, response size and duration, source IP address, user-agent string, request ID, and the relaying Blue-X account identifier where present. Response bodies are not logged, and query parameters outside the whitelist are discarded.
- **Connector accounts (Blue-X):** account identifier and the registration and credential information (e.g. Gaia-X Verifiable Credentials) that the participant provides, together with session, contract and verification activity logs.

No special categories of personal data are processed. The Provider does not use the data for profiling, marketing or automated decision-making.

3. Purpose and legal basis

Request logs are processed to keep the Service stable and secure: error analysis, capacity planning, and detection and blocking of abnormal access. Connector account data are processed to authenticate participants, verify credentials and manage data contracts. The legal basis is the Provider's legitimate interest in operating a secure service (GDPR Art. 6(1)(f)) and the performance of the participant relationship (Art. 6(1)(b)).

4. Retention

Request logs and connector activity logs are retained for the duration of the R&D; project in which the Service is operated and are deleted when the Service is discontinued. Account data are deleted when the participant account is closed. The Provider reviews retention periods periodically and will publish any change in a new version of this document.

5. Technical measures

- Public endpoints are served over HTTPS (TLS).
- The request-log dashboard is restricted to the Provider's operators by authentication; credentials are kept in server environment configuration and not in source code.
- Data minimisation at collection: whitelisted query logging, no response-body buffering, no storage of exception details that may contain secrets.
- Relay headers are validated against strict formats and are not treated as authentication.
- Secrets and keys are excluded from source repositories; deployments run from version-controlled code through an automated pipeline.
- Cloud resources are managed with provider identity and access management (IAM) and least-privilege access.

6. Organisational measures

- Access to logs and account data is limited to the Provider's staff who operate the Service.

- Logs are not disclosed to third parties except where required by law.
- Security incidents affecting personal data are assessed without delay; affected participants and, where required, competent authorities are notified in line with applicable law.

7. Hosting, processors and transfers

The Weather API runs on Amazon Web Services with a managed MongoDB Atlas database. The Blue-X connector runs on Google Cloud in the Seoul region (asia-northeast3). These providers act as processors under their standard data processing terms.

Personal data of participants in the European Union may be processed in the Republic of Korea, for which the European Commission has adopted an adequacy decision under GDPR Art. 45.

8. Rights of data subjects, data export and portability

Data subjects may request access to, rectification, erasure or restriction of their personal data, and may object to processing, by contacting the Provider. Requests are answered within one month.

On request, the Provider exports the personal data and account data it holds about a participant (account information, credentials provided, contract records and related request logs) in a structured, machine-readable format (JSON) and delivers it through a secure channel. Data retrieved from the Service itself are already delivered in open formats (JSON, HDF5, GRIB, ZIP) and can be used outside the Service without restriction by the Provider.
